A reliable line of pumps to cover the most demanding industrial and scientific applications

- Thanks to a very simple and highly reliable design, these field proven rotary vane pumps provide excellent vacuum performance. Agilent's quality and manufacturing standards ensure that the DS Rotary Vane Pumps provide high pumping stability for light gases, low noise, minimal oil backstreaming, and a long operating life.
- Agilent's DS Rotary Vane Pumps conform with CE and RoHS requirements, and all pumps are UL and CSA approved. Agilent's world class technical support organization makes the DS Rotary Vane Pump cost-effective and well suited for a wide range of applications.

Anti-suckback Valve and Vent Device

- This valve isolates the pump should it stop or be idle
- Prevents inadequate venting and oil contamination of the vacuum system when the pump is switched off, or in case of power fail

Forced Oil Circulation

- The dedicated oil circulation gear pump ensures efficient and reliable lubrication of the pump from atmospheric pressure throughout the entire vacuum operating range

Built-in Oil Shield

- This feature minimizes the oil mist at the pump exhaust
- Drastically reduces the oil consumption over long periods of operation
- Reduction of air pollution limiting the impact on the environment

Dual Stage Pumps

DS Series: the two stage design allows:

- Low 10^{-3} mbar operation
- Low operating temperature
- Minimal backstreaming at low pressure
- Good pumping efficiency and gas ballast in the low 10^{-2} mbar region

Worldwide Motors

- Pump motors, available as 1-phase or 3-phase, are suitable for all voltages and frequencies worldwide
- Operational voltages are easily selectable, allowing greater flexibility, easy planning and inventory reduction

Socket Type IEC320

- Permits use of standard power cable
- Eliminates the need to open box and wire the motor

Gas Ballast Valve

- The opening of this valve injects dry air into the second stage of the pump
- This action increases the temperature of the module which facilitates the outgassing and clean up of water vapor or other condensable gases from the oil

Alignment Pins on Pump Module

- The pump module components are assembled and positioned by built-in alignment pins
- These speed up the assembling and maintenance process, avoiding any error

Forced Air Ventilation

- The cooling fan between the motor and the pump:
- Reduces the pump operating temperature
 - Lowers the oil vapor partial pressure
 - Minimizes oil backstreaming and vacuum system contamination

The new MS 40+ Mono Stage Rotary Vane Pump

- High capacity pumping speed with the smallest footprint
- Proven inverter technology
- Ideal for mass spectrometry and electron microscopy
- Lowest noise, highest throughput

HS Series "smart" pumps with green technology

- In 2004 Varian, now Agilent, introduced the first rotary vane pumps with truly "smart" capabilities
- Employ an innovative frequency inverter technology to deliver optimal and consistent performance
- Encompass the worldwide range of voltage and frequency conditions
- Environmentally friendly thanks to reduced power requirements and low start up current

Analytical Instruments and Mass Spectrometry

Rotary Vane Pumps are the most common primary vacuum pumps used on GC-MS, LC-MS, ICP-MS, and MALDI-TOF Instruments.

GC-MS typically uses our smallest pump, the DS42; the pump is needed to rough the system and back the high vacuum Turbo or Diffusion pump.

LC-MS and ICP-MS use a medium capacity pump on the sample injection/system interface, typically a DS402 or a DS602, and a smaller pump to back the system Turbo pumps.

MALDI-TOF depending on system size, uses the DS102 to the DS602 as roughing or interface pumps.

Nowadays high-end instruments, such as LC-MS and ICP-MS, can take advantage of the benefits of HS 452, HS 652 and MS 40+:

- Large pumping capacity
- Consistent worldwide performance thanks to universal voltage and frequency
- Single phase
- Low power requirements and start up current
- Remote control and diagnostic
- Adjustable performance, low noise
- Green technology

Electron Microscopes

Small pumps, typically the DS202 and the DS302, are still used in competition with dry pumps to rough the system and the high vacuum Turbo or Diffusion pump, condensable vapor.

Leak Detection

Pumps in the DS102, DS202 and DS302 range are typically used to back the Helium Mass Spectrometer Turbo or Diffusion pump.

The roughing pump is usually bigger, typically up to the DS402/DS602, and can still be installed on the Leak Detector itself, while bigger pumps can be used to pump down high throughput Leak Detection systems.

Industrial Vacuum Processes

Vacuum coatings, Metallurgy Vacuum Furnaces, Lamps and TV Tube manufacture, Sterilizers, Freeze Dryers, Glove Boxes, High Speed Centrifuges, and Flywheels (for energy storage) represent the main Industrial applications for Dual Stage Rotary Vane pumps. In the first four fields of application the Rotary Pumps are used as roughing and backing pumps for High Vacuum Turbo or Diffusion pumps, while in the others the Rotary Pumps are typically the only vacuum pumps on the system.

High Energy Physics and Research Laboratories

In these applications the Rotary Vane pumps are mainly used in combination with Turbo pumps. The combination is typically used to rough and pump High Vacuum experimental chambers or to start Ion Pumps in ultra high vacuum systems.

Agilent Oil, GP Type Mechanical Pump Fluid

Agilent GP Type Fluid is a mechanical pump fluid recommended for use in non-corrosive applications. As a result of molecular distillation, it has low vapor pressure and, therefore, backstreams less than undistilled refinery products.

Ordering Information

Description	Part Number	Shipping Weight lbs (kg)
1 liter bottle	K7516301	3.5 (1.6)
1 gallon bottle	K7516302	14.0 (6.4)

Agilent's new traps are designed to prevent the backstreaming of mechanical pump fluids. Copper and stainless steel gauze inserts are designed to reduce oil backstreaming. Molecular sieve inserts are available for applications where it is desirable to increase water vapor pumping speed while eliminating backstreaming above the trap.

Ordering Information

Foreline/Roughing Traps: please call Agilent for ordering information

For any further details on our rotary vane pump accessories, please contact Agilent Vacuum Products.

AGILENT HS SERIES PUMPS FEATURES AND BENEFITS

- Agilent's HS 452 and HS 652 rotary vane pumps employ an innovative frequency inverter technology that delivers optimal and consistent performance throughout the worldwide range of voltage and frequency conditions.
- Operating with low power requirements, the microprocessor-controlled frequency inverter, combined with a 3-phase motor, is an efficient driving unit capable of delivering the high starting torque required for a dual-stage oil pump.
- Green technology: environmentally friendly thanks to reduced power requirements, low start up current, minimum oil mist at pump exhaust.

ROTARY VANE PUMPS

Rotary Vane Pumps

I/O and RS232/RS485 Communication

- Adjustable pumping speed from 45 to 68 Hz permits easy integration and reduces noise levels.
- Pump performance can be tailored to specific applications to reduce system costs.

Universal Input Voltage

- Truly universal single-phase voltage and frequency provide worldwide compatibility.
- Constant performance at different input frequencies.

Remote Diagnostics

- Remote monitoring and control of oil consumption, power and current.
- Reduces maintenance costs, improves uptime and offers higher reliability.

Reduced Power Requirements

- Inverter technology reduces the power required compared to traditional single phase motors.
- Circuit-breakers are no longer required, resulting in reduced system costs.

Higher Nominal Rotational Speed (2000 rpm)

- The pump is ideally suited for steady and high gas-load applications.

► Agilent HS 452

Dimensions: millimeters (inches)

The first rotary vane pumps with truly “smart” capabilities.

- Agilent’s HS 452 and HS 652 pumps employ an innovative frequency inverter technology that delivers optimal and consistent performance while encompassing the worldwide range of voltage and frequency conditions.
- Operating with low power requirements, the microprocessor controlled frequency inverter, combined with a 3-phase motor, is an efficient driving unit capable of delivering the high starting torque required of a dual-stage oil pump.
- HS 452 and HS 652 technology solves the common problems inherent in traditional single-phase motors. Smart Pumps start with inrush current about 7 times lower than that of equivalent traditional pumps.

- Unlike traditional pumps, Smart Pump’s software driven startup procedure recognizes faulty pumps within seconds, and so avoids uncontrolled load conditions. The result is very easy pump integration.
- The 3-phase inverter output is constant and independent of single-phase input frequencies and voltages. Motor efficiency and power factors remain optimal and as a result motor and pump work easy to drive the pump. Pump performance can be tailored by setting the rotational speed for specific applications. The software monitors and logs pump parameters making it possible to perform pump and system diagnostics.

Technical Specifications

Free air displacement	27 m ³ /h (16 cfm)
Pumping speed*	22 m ³ /h (13 cfm)
Ultimate total pressure*	2 x 10 ⁻³ mbar
Ultimate total pressure with gas ballast*	1 x 10 ⁻² mbar
Operating voltage	100-120/200-240 V ±10%, 50/60 Hz
Inverter maximum output power	780 W
Nominal rotation speed	2000 rpm
Weight	33 kg (73 lbs)

* According to PNEUROP 6602

ROTARY VANE PUMPS

Ordering Information

Pump	Part Number
HS 452 Smart Pump 1 phase worldwide motor	9499360
IP44 accessory connector Kit	9499367

Accessories	Part Number
NW25 oil exhaust filter	9499392
Oil return kit	9499376
Oil drain extension	9499375
Rotary vane fluid, DS19 type, 1 liter	9499390
European plug power cable 2 meters 1 ph	9499396
USA plug power cable 2 meters 1 ph	9499397
UK plug power cable 2 meters 1 ph	9499398
Minor maintenance kit	9499371
Major maintenance kit	9499382

Application Note

Steady state high gas load applications exploit the major benefits of the smart technologies. When operated at pressures lower than the auto-tuning pressure, the HS 452 and HS 652 outperform the equivalent traditional DS 402 and DS 602 pumps by 10% at 60 Hz and by 30% at 50 Hz. The Smart Pumps can run below auto-tuning pressure at their full speed of 2000 rpm. As shown in the pumping speed curve

at top right, the HS 452 has an auto-tuning pressure of 100 mbar while the HS 652 has an auto-tuning pressure of 40 mbar. Despite the lower power requirements of 780 W max, the Smart Pumps deliver good performance in the roughing phase. Fast cycling or inrush applications need to be evaluated on a case by case basis with our application engineers.

► Agilent HS 652

Dimensions: millimeters (inches)

The first rotary vane pumps with truly “smart” capabilities.

- Agilent’s HS 452 and HS 652 pumps employ an innovative frequency inverter technology that delivers optimal and consistent performance while encompassing the worldwide range of voltage and frequency conditions.
- Operating with low power requirements, the microprocessor controlled frequency inverter, combined with a 3-phase motor, is an efficient driving unit capable of delivering the high starting torque required of a dual-stage oil pump.
- HS 452 and HS 652 technology solves the common problems inherent in traditional single-phase motors. Smart Pumps start with inrush current about 7 times lower than that of equivalent traditional pumps.

- Unlike traditional pumps, Smart Pump’s software driven startup procedure recognizes faulty pumps within seconds, and so avoids uncontrolled load conditions. The result is very easy pump integration.
- The 3-phase inverter output is constant and independent of single-phase input frequencies and voltages. Motor efficiency and power factors remain optimal and as a result motor and pump working temperatures remain low and constant worldwide.
- Smart Pumps can be remotely driven via discrete I/O or RS232/RS485 interfaces. Agilent’s T-plus Navigator Software facilitates communication making it very easy to drive the pump. Pump performance can be tailored by setting the rotational speed for specific applications. The software monitors and logs pump parameters making it possible to perform pump and system diagnostics.

Technical Specifications

Free air displacement	40.3 m ³ /h (23.8 cfm)
Pumping speed*	32 m ³ /h (19 cfm)
Ultimate total pressure*	2 x 10 ⁻³ mbar
Ultimate total pressure with gas ballast*	1 x 10 ⁻² mbar
Operating voltage	100-120/200-240 V ±10%, 50/60 Hz
Inverter maximum output power	780 W
Nominal rotation speed	2000 rpm
Weight	33 kg (73 lbs)

**Mono Stage Rotary Vane Pump
Small Footprint, High Pumping Capacity**

- Sophisticated Electronics and excellent mechanical design allow high pumping capacity and reduced dimensions.
- Suitable for steady and high gas throughput conditions at pressures below 10 Torr, in applications like Mass Spectrometry (including LC-MS, ICP-MS, GC-TOF-MS, etc.), Electron Microscopy, and other Scientific Instrumentation.

Please contact Agilent to qualify use in cyclic applications.

Highest Performances / Size Ratio

- Base pressure below 5×10^{-2} mbar (3.75×10^{-2} Torr)
- High pumping speed over a wide range, from atmosphere to 1 mbar (0.75 Torr)
- Inverter technology allows to manage pumping speed to more than $45 \text{ m}^3/\text{h}$ (26.5 cfm)
- Best noise level, with the highest throughput

Inverter Technology

- Proven on-board electronics allows constant performance worldwide
- Truly universal voltage and frequency
- Single phase
- Inverter electronics enable tailoring pumping speed to each application

Interface Capabilities

- I/O and RS232/RS485 enable adjustment of operating parameters simplifying system integration
- Remote diagnostic allow the control of:
 - Oil level
 - Temperature
 - Power
 - Current

T-Plus Software

- T-Plus software allows control of pump parameters via PC, improving uptime and reliability, and reducing maintenance costs

Worldwide Service Capability

- Three levels of Product Support
 - 24h Advance Exchange
 - Factory Repair
 - Upgrade Program
- allow global coverage of service needs to maximize productivity and uptime

Smallest Dimensions

- The smallest single stage $40 \text{ m}^3/\text{h}$ pump in the market. $297 \times 418 \times 225 \text{ mm}$ (11.69 x 16.46 x 8.86 inches)
- Including on-board electronics, anti suck-back valve, integrated exhaust filter and oil return kit
- Easier system integration
- Simple maintenance
- Allows smaller overall instrument design, therefore reducing costs

Green Technology

- Environmentally friendly and cost-effective due to reduced power requirements, low start up current (< 10 A) and stand by mode
